

Through wall fire protection...

...we thought inside the box

The long awaited reforms to fire safety legislation are almost a reality and the new legislation places responsibility for ensuring effective fire safety measures with the employer or owner of the building.

Every time a new data cable is installed through a fire wall or compartment, it must be re-sealed. If it is not then the building does not comply with the fire regulations set out in building regulations.

EZ Path™ by Cablofil ensures permanent through wall fire stopping with unlimited cable changes/installations. Once fitted the building owners know that the building is 100% compliant 100% of the time.
